

PwrSys

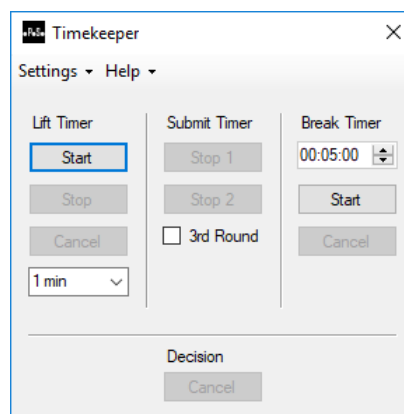

The Complete Powerlifting Referee System

To date powerlifting referee systems have been second class. Referees have been forced to display decisions by holding up coloured flags, or using antiquated systems involving hardwired controllers operating light globes. Modern wireless systems do exist, but they suffer from poor battery life and unreliability. That has all changed with the introduction of PwrSys, the complete powerlifting referee system. PwrSys provides a reliable, best in class wireless connection; there is no need to run metres upon metres of cable to referees. The referee remotes run off AA batteries, with a battery life that is second to none. All this comes in a small 274 mm (W) x 248 mm (H) X 123 mm (D) carry case, perfect for travel and storage.

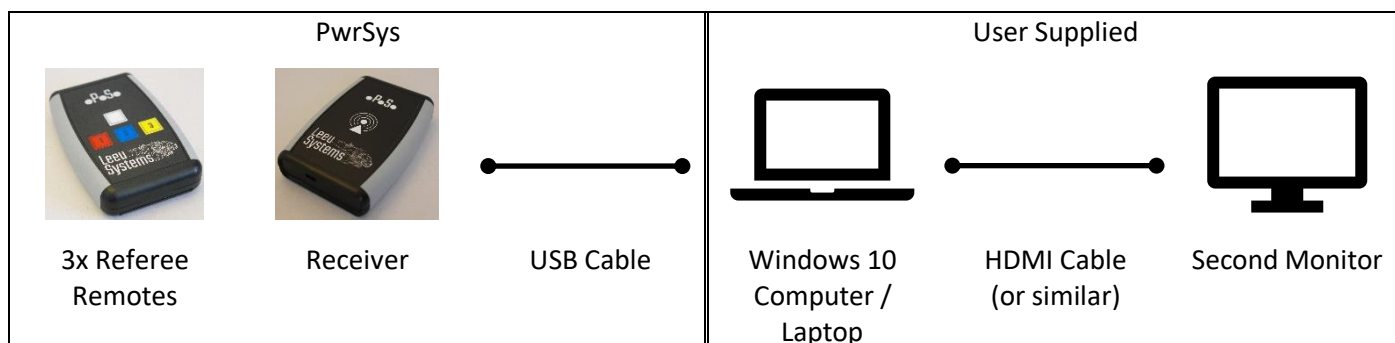

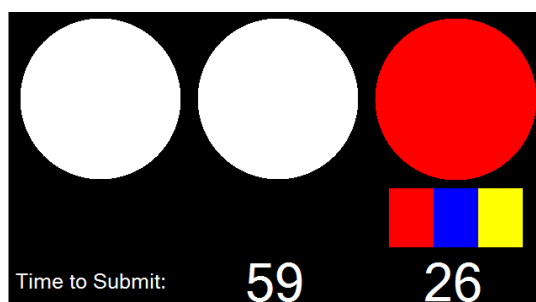

PwrSys: Receiver, 3x Referee Remotes and Carry Case

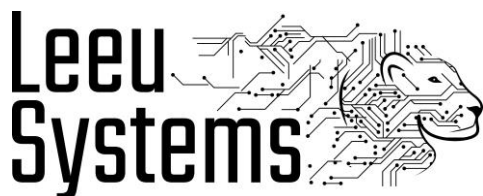

Competition day is simplified by the intuitive software, which allows the Timekeeper to control the lift timer, attempt submission timers and break timer with ease. Referees simply concentrate on adjudicating lifting!

Decisions are displayed automatically once all referees have submitted a decision. The display includes all timers, pass fail decisions and failure reasons.
